The Young Birder's Guide To Birds Of North America (Peterson Field Guides)

Synopsis

Covering 300 of the most common birds in all of the United States and Canada, The Young Birder's Guide to Birds of North America is loaded with color photographs, drawings showing typical behaviors, range maps, an easy-to-use checklist, fun facts, and authoritative information about each bird, its vocalizations, and its habitat. While other field guides might overwhelm kids who are new to birding, The Young Birder's Guide to Birds of North America was created with help from kids. Bill Thompson's own son and daughter and their elementary school classes helped select the content. Kid tested, kid approved!

Book Information

Series: Peterson Field Guides

Paperback: 368 pages

Publisher: Houghton Mifflin Harcourt (April 24, 2012)

Language: English

ISBN-10: 0547440219

ISBN-13: 978-0547440217

Product Dimensions: 0.8 x 4.5 x 7.5 inches

Average Customer Review: 4.8 out of 5 stars See all reviews (59 customer reviews)

Best Sellers Rank: #86,085 in Books (See Top 100 in Books) #68 in Books > Science & Math > Biological Sciences > Animals > Birds & Birdwatching > Field Guides #97 in Books > Science & Math > Nature & Ecology > Field Guides #451 in Books > Science & Math > Nature & Ecology > Fauna

Age Range: 9 - 12 years

Grade Level: 4 - 7

Customer Reviews

this is an excellent guide which is easy to follow. My only complaint is that it is not clear what order the birds are listed in - it is not alphabetical, or by color, but just seems random, which means you have to page through the entire book to try to find a bird. There must be some system but they do not say anywhere what the system is. I have looked in the "how to use this book" section and read the foreward etc, but it doesn't seem to say anywhere. The maps are especially useful, about where and when the bird is found, and the photos are very clear.

I've been reading field guides to birds for about fifty years. Bill Thompson's "Young Birder's Guide to Birds of North America" is, without question, the best I've seen for beginning birders. I've purchased one for my granddaughter and another for a family of young nieces. I'm quite sure that they are not the last. When Bill wrote the book, he got plenty of input from his son Liam, daughter Phoebe, and her 5th grade class. It shows. There is plenty of information for interested folks of all ages, but it is carefully written so as to neither patronize young readers, nor to be too far over their heads. I read my granddaughter's copy before handing it over, and there was a lot that was news to this old birder. There are about three hundred species included, with identifying marks, information about habits, range maps and a variety of photographs, in addition to drawings by his wife, the wildlife artist Julie Zickefoose. The book is readable, portable, durable, and complete enough to satisfy most bird lovers who are interested in the birds in their backyards and local woods. It might require a bit of supplementation when the Spring and Fall migrants are moving, but in most situations it will get the job done. More importantly, it entertains as well as informs. The author is editor of "Bird Watcher's Digest," and leads birding trips all over the world. He, Julie and the kids, are well-known in birding venues. He also plays guitar, sings and writes for The Rain Crows, a band popular in Eastern Ohio and in birding sites across America. Disclaimer: the Thompson family are friends, but I was not asked to write this review. If I hadn't liked the book, I would simply not have written anything.

This a beautiful book! Gave it to my 10 year old grandson and he is enjoying it. Just enough information, but not too much. Each page has some interesting tidbit about the bird species. Quite complete, not childish. Great job!

I bought this for the 11-year old daughter of a woman who was hanging wallpaper for us. I was showing her all the birds in our yard and she was very interested and picked up on them quickly. I ordered the book, had it in 2 days with Prime, and gave it to her the next time she came over with her mother. I also handed her a pack of those little colored Post-It tabs that you use to show someone where to sign a document. I told her she could mark the pages of the ones she liked. As she went through the book she would say "OHHHHHHHHHH!!!" at each bird that caught her eye and would pull out a tab and stick it on the page. A few more pages and another "OHHHHHHHHHHHHHHHH!!". When she left there were about 25 tabs sticking out of the top of the book. I think she'll have it a long time. Probably the best investment I've ever made.

The young birder's guide covers 300 birds for the continent. Though I have 300 US birds in my life list, there are birds here I have never found. So it is more of an advanced beginner book. Not necessarily for children only. And well beyond back yard birder. The layout is ideal, with a page for each bird. A color picture and a black and white drawing of behavior. Seasonal plumage appears sometimes in pictures but often only in text description. Well done! Need more of these simple guides. Many guides have too much info. I just want to ID the bird with minimal marks.

The kids were able to look up a bird easily. They liked the "wow" facts given for each bird. (We did find that American Tree Sparrows were not included!) Range maps on each page are helpful. This guide covers 300 species from all over the country. I found the binding rather stiff; it's hard to keep the book open.

I kept the book on the kitchen table, where we could see the birds at our feeders while we ate. Each time the 7 year old asked, "What's that bird?" I'd find the page for him and then he would take it from there. By the end of the week, he knew all our birds (chickadees, titmice, sparrows, hummers, cardinals, blue jays, nuthatches, woodpeckers, wrens), and the "Wow" facts about them. He also often picked up the book to find other birds, and when he would swear to me he'd just seen an eagle, I'd smile and enjoy his newfound interest in my lifelong hobby.

I really like this guide. It is simple but has enough information to be useful. It has neat tips which adds to the interest factor. The photos are clear and catch the special qualities of each species. The size of the book, light and compact, makes it great for hikes and birding trips. It even fits in a baggie, which makes it a nice addition to a canoe trip. There is nothing babyish about this book. It has solid information and technique that can be used by anyone. I highly recommend it.
